

# Problem Statement

Given the name of the customer CN, mobile number M, billing address A, number of items I and cost of each item C, write a java program to print the bill.

**Formula :** Bill Amount = I \* C

**Constraints:**

5 < length of(CN) < 50

Number of digits (M) is 10

10 < length of(A) < 100

1 < I < 100

.05 < C < 299.99

**Input Format :**

Lines contain CN, M, A, I and C

**Output Format :**

Name:<Name of the customer, CN>,  
Mobile:<Mobile Number, M>,  
Address:<Address, A>,  
Items:<Number of Items, I>,  
Bill Amount:<Bill Amount>

**Sample Input :**

Harry  
9988113322  
3rd Cross-Down South-CA  
3  
2.5

**Sample Output :**

Name : Harry  
Mobile : 9988113322  
Address : 3rd Cross-Down South-CA  
Items : 3  
Bill Amount : \$7.5
